

Habitats that provide shelter & food for birds can be found in many forests, parks or even your backyard. Native flora is essential to a bird's well-being. Birds search for acorns, seeds and fruit in the boughs & branches of native trees & shrubs. Birds also hunt in & around these for invertebrates, such as slugs, worms & other insects.

Carolina Wren

Grey Catbird

Brown Thrasher

Ruby-throated Hummingbird

### Beautyberry

Wood Thrush  
Carolina Wren  
American Robin  
Northern Cardinal

### Coral Honeysuckle Vine

Gray Catbird  
American Robin  
Brown Thrasher  
Ruby-throated Hummingbird

# Roosevelt's Little White House

"The nation that destroys its soil destroys itself." FDR, 1937

### Autumn Sage

### Mojito Mint

### Lemon Balm

Be a lifetime birder, like FDR. While a teenager he recorded bird sightings & became a member of the American Ornithologists' Union. While president, he participated in the New York, Hudson Valley annual bird count. In 1934, Congress passed the Migratory Bird Hunting & Conservation Stamp Act to restore depleting migratory-route habitats & water fowl wetlands. Conservation postage stamps funded the land acquisition projects.
